- Up to **4** additional safe passive output module relays
- **1** additional gateway

- 1 Basic master module**  
Safety module with 9 function blocks, 8 safe inputs and 4 safe outputs (also suitable for stand-alone operation)
- 2 Input module**  
Expansion module with 10 function blocks and 8 safe inputs
- 3 Output module relay**  
Expansion modules with 2 or 4 safe, potential-free relay contacts
- 4 Gateway**  
Fieldbus or Ethernet gateways for easy diagnosis of the **samos®** system

## samos<sup>®</sup> – maximum flexibility

### Intelligently connected modules

The modules are connected to a standard DIN rail and pressed together. Connected on the left of the rail is the Master, the obligatory base module (with coding 1), input modules (coding matches the base module arranged to the left) and relay output modules. All modules in the **samos** overall system are permanently coded and are always permanently assigned to a similarly permanently coded basic module, which eliminates any confusion during service work, for instance.

The relay modules are integrated in the function via external wiring. If necessary such system group are made up of basic modules, input modules and relay output modules can be wired together. This allows the implementation of a wide variety of input/output functions with separate or combined effects.

### Functions with added value

The functions of the basic module and the input modules are set either individually or in combination on the front with 10-position rotary switches (e.g. emergency stop and protective door monitoring with controlled shutdown).

Clear handling – maximum flexibility

### samos<sup>®</sup> modules

The clear and simple user interface helps to implement safe solutions.

Additional functions such as automatic reset, startup and re-startup blocking or retriggering of the off-delay are implemented with terminal configuration.
